

a Task: evaluate edits

Make a rainy night.
Keep the street layout and buildings unchanged.
Each edit is scored separately.

Layout fidelity

Preserved

Wider street

Visual richness

Less vivid

More vivid

Human: A > B

≠

Evaluator: B > A

b Default setup

Try a different direction

Initial evaluation program

Compare layouts

Wider street found;
score unchanged.

× B > A

Check rain effects

Score rainfall and
wet-road cues.

Inspect details

Check windows
and reflections.

Layout finding left unused

c IterEval: depth-first evolution

Continue one direction: layout fidelity

Initial evaluation program

Detect layout changes

Wider street found;
score unchanged.

× B > A

Penalize layout changes

Same penalty for
small and large edits.

× B > A

Penalize major errors more

Street widening
outweighs extra detail.

✓ A > B

Local ordering ≠ candidate acceptance.

Illustrative search paths. Nodes are complete evaluation programs; images stay fixed.
