

a Task: evaluate edits

Make a rainy night.
Keep the street layout
and buildings unchanged.

Each edit is scored separately.

Source

A

B

A

Layout fidelity **Preserved**

B

Wider street

Visual richness Less vivid

More vivid

Human: A > B

≠

Evaluator: B > A

b Default setup

Try a different direction

Initial evaluation program

Compare layouts

Change found;
not scored.

× B > A

Check night scene

Rain at night?
Wet pavement?

Inspect details

Windows?
Reflections?

Illustrative search paths. Nodes are complete evaluation programs; images stay fixed.

c IterEval: depth-first evolution

Continue one direction: layout fidelity

Initial evaluation program

1 Detect layout changes

Detected, but
not scored.

× B > A

2 Use changes in scoring

Scored, but
underweighted.

× B > A

3 Weight by severity

Larger changes,
larger penalties.

✓ A > B

Local ordering ≠ candidate acceptance.
